SUMMARY

Software Engineer | Backend & AI Engineer with ~1 year of experience building scalable backend applications using **Java, Spring Boot, REST APIs, MySQL, Microservices, and Apache Kafka**. Hands-on with **Spring AI, LLMs, RAG**, and AI-assisted development. Currently preparing for the **AWS Solutions Architect – Associate** certification with a strong foundation in **DSA, System Design, and Cloud-Native Architecture**.

EXPERIENCE

Cognizant Technology Solutions

June .2025–Present

Jr. Software Engineer

Pune, India

- * Engineered scalable Spring Boot microservices and **6+ secure REST APIs** using Spring Security, JWT, and MySQL, collaborating with Angular developers to deliver enterprise applications supporting multiple business workflows. .
- * **Built** an internal RAG-based AI chatbot using Spring AI, LLMs, and vector embeddings that **reduced ticket resolution time by 30 to 40%** and **improved support productivity by 40 to 45%** through automated root cause analysis and SOP-based recommendations.
- * Improved support efficiency by enabling AI-assisted knowledge retrieval, increasing team productivity by **40–45%** and reducing average ticket resolution time by **30–40%**, while following **Agile, Git, Docker**, and **CI/CD** practices.

PROJECTS

SurePay AI Powered Payment Platform | Java, Spring Boot, Spring AI, Kafka, Docker, Angular

- Designed and developed a cloud-ready online payment platform using Java, Spring Boot, and Microservices with API Gateway and Eureka Server for scalable service communication.
- **Implemented** JWT-secured REST APIs and Kafka-based asynchronous messaging to ensure reliable communication across **6 microservices** and support fault-tolerant transaction processing. and Apache Kafka-based event-driven communication for reliable asynchronous transaction processing.
- Integrated an AI-powered Fraud Detection Microservice using Spring AI and Large Language Models (LLMs) to analyze transaction behavior, assign fraud risk scores, and generate intelligent fraud explanations.
- Containerized services using Docker and developed a responsive Angular frontend following cloud-native deployment principles.

Bug Tracking System | Java, Spring Boot, Angular, Docker, MySQL

- Engineered RESTful APIs and optimized MySQL queries, **improving bug retrieval performance** while supporting complete role-based bug lifecycle management.
- Designed RESTful APIs, optimized relational database performance, and containerized the application using Docker.
- Improved application reliability through comprehensive unit and integration testing using JUnit and Mockito.

EDUCATION

Shri Ramdeobaba College of Engineering and Management

Jul. 2021 – Jul. 2025

Bachelor of Technology in Information Technology

Nagpur, India

- **Relevant Coursework:** Data Structures & Algorithms, DBMS, OS, Computer Networks, OOPs, Software Engineering

SKILLS

Programming Languages: Java, Python, JavaScript, SQL

Backend: Spring Boot, Spring Security, Spring AI, REST APIs, Microservices, Apache Kafka, JWT, OAuth2

Frontend: Angular, TypeScript, HTML, CSS

AI & Generative AI: Spring AI, Large Language Models (LLMs), Prompt Engineering, Retrieval-Augmented Generation (RAG), AI-assisted Development, Github Copilot beginner to pro (Udemy)

Cloud & DevOps: AWS (Solutions Architect Associate – In Progress), Docker, Git, GitHub, Maven, Gradle, Linux, CI/CD

Databases: MySQL, PostgreSQL, MongoDB (Basics)

Core CS: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design
